Bolt-on Adjustable Depth Side Plates

Front Mounted Rock Screed ↑

Rock Screed Grading Loose Rock

Evolution Slipform pavers are designed to pave to the grade. Controlling grade is tricky when paving over loose base rock used for pervious pavements. Our removable rock screed reduces pressure to the grade skids and aids depth control. Minor ruts and inconsistencies in the aggregate are leveled by this screed.

TrailRider placing crushed rock "Side Slope Stabilizers" engaged No side slip even with 12° slope in 8 feet

Stabilizers keep paver on track

The TrailRider pavers now come equipped with Side Slope Stabilizers to help the paver track accurately behind the tow vehicle. This photo shows that even when exaggerated to a one foot in eight side slope the paver tracks properly.
